

Скачивание шаблонов контейнеров Virtuozzo

[rosplatfoma](#), [virtuozzo](#), [ct](#)

Чтобы скачать шаблон контейнера Virtuozzo на примере Ubuntu 18, необходимо

1. Получить пакет с переменными `wget`
`https://repo.virtuozzo.com/vz/releases/7.0.13-298/x86_64/os/Packages/v/vzpkgenvdeb64-7.0.0-16.vz7.x86_64.rpm`
2. Получить сам шаблон `wget`
`https://repo.virtuozzo.com/vz/releases/7.0.13-298/x86_64/os/Packages/u/ubuntu-18.04-x86_64-ez-7.0.0-17.vz7.noarch.rpm`
3. Установить `yum localinstall vzpkgenvdeb64-7.0.0-16.vz7.x86_64.rpm`
4. Установить `yum localinstall ubuntu-18.04-x86_64-ez-7.0.0-17.vz7.noarch.rpm`
5. Теперь можно создать контейнер `prctl create ct --vmttype ct --ostemplate ubuntu-18.04-x86_64`
