

Как настроить LACP на Linux

```
nmcli con add type bond con-name bond0 ifname bond0 mode 802.3ad ipv4.method auto
nmcli con mod id bond0 bond.options
mode=802.3ad,miimon=100,lacp_rate=fast,xmit_hash_policy=layer2+3
nmcli con add type bond-slave ifname eno1 con-name eno1 master bond0
nmcli con add type bond-slave ifname eno2 con-name eno2 master bond0
nmcli con add type bond-slave ifname eno3 con-name eno3 master bond0
nmcli con add type bond-slave ifname eno4 con-name eno4 master bond0
nmcli con up bond0
```

Как проверить?

```
cat /proc/net/bonding/bond0
<...>
    Partner Mac Address: fc:83:99:fa:2c:01
<...>
```
